LERWIN LOH

HP: 92483989 Email: lerwinloh22@gmail.com

TECHNICAL SKILLS

- Data Analytical Tools
  - Tableau, Figma, UiPath
- Data Management Tools
  - Splunk, MS SQL, R Programming
- Programming Languages
  - Java, JavaScript, Python, C, C#, Swift
  - HTML5, CSS
- Programming Frameworks
  - Nodejs, ReactJs Flask, ASP.NET Core

EDUCATION

National University of Singapore **Aug 2025 - Present**
Bachelor of Computing in Computer Science

- NUS's Merit Scholarship
- BT1101 Tutor Assistant (Aug 26 - Present)

Nanyang Polytechnic **Jan 2019 - Dec 2023**
Diploma in Business & Financial Technology

- Top in Cohort, Perfect 4.0 GPA.
- 28 distinctions out of 32 modules.
- Director's List for all 6 consecutive semesters.
- OCBC Gold Medal Award, 2023
- Singapore Computer Society Award, 2023
- Edusave Merit Bursary, 2020

Jan 2015 - Dec 2018

Secondary School, Mayflower

- N Level Certificate (Net 6 points).
- Co-Curricular Activity: NPCC, Staff Sergeant.
- Edusave scholarship, 2018.
- Edusave Eagles Award, 2018.
- Edusave scholarship, 2017.

Primary School, Da Qiao Primary **Jan 2009 - Dec 2014**

WORK EXPERIENCE

Nanobee Co-Founder, Full Stack Developer **Nov 2022 - Apr 2024**

- Nanobee is a pre-seed stage start-up started by students from NUS SoC, NYP Business, and IT schools. We aim to streamline the nano-influencer process to help small businesses grow by using Artificial Intelligence (AI) to profile and match suitable

influencers to business campaigns and manage ongoing campaigns. We are backed by Nanyang Polytechnic's $10,000 JumpStart grant (2nd Cohort, 2022).
- My role is to develop and maintain Nanobee's web application front-end and the back-end systems such as, curating Nanobee's intuitive UI/UX, Cloud Database, system logic, and perform crucial analyses.
- Skills Used: NodeJs Framework, JavaScript, Html, CSS, Django.

Associate Researcher Intern at Procter & Gamble, Biopolis **Sep 2022 - Feb 2023**

- Successfully curated a brand & product detection model, backed by sophisticated algorithms to accurately identify specific brands and products. The aim of this is to aid in automatically identifying and perform passive analysis on the products the consumers in-the-wild are using. This model also allows identified products to be mapped with its information such as the ingredients, product form, market origin, etc., which will aid in product understanding.
- The brand & product detection model is validated with a precision accuracy of 95.86% and a recall accuracy of 96.06%.

HACKATHONS

TIKTOK, TechJam 2026 **Aug 2026 – Sept 2026**

- Certificate of participation.

DSTA, BrainHack 2026 **Jan 2026**

- Competing in category: CODE_EXP
- Clinched 1st Place at DSTA BrainHack CODE_EXP.

NUS, Hack4Good 2026 **Jan 2026**

- Certificate of participation.

NUS, CDE Ideate 2025 **Aug 2025 – Sept 2025**

- Certificate of participation.

PROJECTS

NUS, CP2106 Orbital **Apr 2026 - Aug 2026**

- **Level: Artemis**

NYP, Full Stack Development with NodeJs **Apr 2022 - Aug 2022**

- This project focuses on creating a Business to Customer (B2C) web application that facilitates an ecommerce shop, admin management, and supplier management features. My team and I have successfully created a superior ecommerce platform that mimics a full cycle from customer purchase, order management, aftersales management, discount management, admin management, product management, and even mimicked supplier interactions through code.

NYP, Business Innovation Project with NodeJs **Apr 2022 - Aug 2022**

- With the problem statement, "How can you help migrants create personal digital identity that can be trusted and accepted globally?" given from PolyFinTech 100 API Hackathon 2022, my team and I came up with an cutting edge solution, which we were also nominated and represented NYP for the PolyFinTech 100 API Hackathon 2022

competition. Utilising this problem statement, My team and I created a viable proof of concept (POC) which uses cutting edge technologies such as blockchain implementations and AI Automation features.

NYP, E-Business Project with C# & ASP.NET **Nov 2021 - Feb 2022**

- Using C# and ASP.NET, this project is developed with dynamic and database-driven web applications such as SQL. Security and Mimicking "Automation" are also two major components that are implemented into the E-business Website.

NYP, App Development with Swift, Diploma Plus Project **Apr 2021 - Aug 2021**

- This project focuses on creating a Mobile Application on an IOS platform using swift and MySQL language. My friend and I have created a mobile application that targets the booking of Gym facilities for Nanyang Polytechnic.

NYP, Business Analytics Project **Apr 2021 - Aug 2021**

- My team and I have successfully applied visualization concepts and techniques in the development of a business analytic and business intelligence application, to support the hypothesis, "The ease of house ownership in Singapore is increasing".
- Our team have achieved Distinction for integrating database and Python programming in Data Cleaning and Extraction.

NYP, App Development Project **Nov 2020 - Feb 2021**

- This project focuses on Business to Business (B2B) that makes use of application web services. My team and I created a website called, "Candy Floriculture" using Python, HTML, CSS and JavaScript. This website is developed based on the python flask framework and it aims to enable consumers to make transactions seamlessly at their own comfort. Our team have outperformed ourselves and achieved Distinction for this project.

COURSES

Robotics Process Automation Development (RPA), Diploma Plus
Nanyang Polytechnic Year 3, Semester 1

- Grade: A
- Demonstrated proficient use of UiPath Studio software application

Machine Data Analytics & Operational Intelligence (Splunk), Diploma Plus
Nanyang Polytechnic Year 2, Semester 2

- Grade: Distinction
- Demonstrated proficient use of Splunk software application

App Development with Swift, Diploma Plus
Nanyang Polytechnic Year 2, Semester 1

- Grade: A
- Demonstrated proficient use of Swift programming
